Waukegan, IL 60085

TECHNICAL DATA SHEET: C-55 URETHANE ACCELERATOR

Product Overview

C-55 is used to accelerate the cure time for all our isocyanate reacted materials. It is important to note that while the cure times will be shorter, the working time will also shorten when using this additive. A starting point is 2.5-3.5 ml to a 2- or 3-gallon mix.

Uses and Benefits

C-55 should be added to the mixed kit as the last additive. Testing is required by the user to make sure the reduced working time can be installed properly by the crew. For further instruction and information, contact us at lab@polymernation.com.

* Dispose of material, containers, solvents, etc., per Federal, State and local guideline, rules and laws
